AMAZON
SUPERTIRES

Guaranteed to render mileage "satisfactory to the consumer!"

The outstanding feature of Amazon Supertires is the reinforcement for protection against blowouts. This is an extra fabric "breaker strip" built into the side walls of the tire the place where the "traction wave" is generated and where the tire is continually flexing. This side breaker strip binds the tire together, prevents the side walls from overstretching under excessive load or strain, which would so stretch and weaken the fabric as to loosen the plies, resulting ultimately in a blowout.

This super carcass strength and the wear resistance of the tread assure you doubly long mileage at absolutely the lowest cost. Let your next tire be an Amazon.

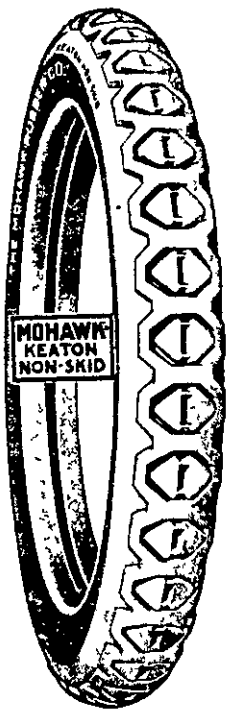
Speaking of Skidding

How would it seem not to have to worry about skidding or bother with chains?

Wouldn't it add a whole lot to the pleasure in driving your car on Akron's hills and crowded streets?

The new Mohawk-Keaton Non-Skid Tire will do it positively. We investigated it nearly two years before deciding to manufacture it. Combined with the well known Mohawk Quality it is a wonderfully effective and economical tire.



Sam S. Miller makes the tires. Our local branch at 32 West Market [opp. Hdw. & Supply Co.] sells and applies them, also sells gasoline, oil, patches, etc.

Who's your tire dealer?

YOU may not care who you buy tires from, so long as you get the tires you want; that's usually the way. And generally, the tire dealer doesn't care who buys them, so long as he gets the money.

But there's a better way, and the first dealer in Marathon Hand-made Tires you come to will show you the better way. You'll find him as interested in what you're to get for your money as in what you're going to pay him. He's selling tires to you for what there is in it for you, as well as for him.

That's really why he sells Marathon Hand-made Tires.

MARATHON

SPEED ENDURANCE

He knows the difference between a hand-made carefully fashioned tire, and the machine-made, he knows it's a difference in performance.

He knows that you'll both make more profit on a Marathon Hand-made Tire than on the ordinary kind He knows, ask him

Power may be distributed with rope by two distinct methods, the English or Multiple System and the American, or Continuous System. The English System is usually used in main drives of larger powers, while the American or continuous wrap system, operates successfully from small to large loads and on long or short centers, horizontally, vertically, parallel, or at an angle to each other. On the latter system, the use of Tension Carriages is essential to keep a uniform tension at all times on the rope.
